

# ID Photo Processor

## Batch Photo Processing

**ID Photo Processor** is designed for automatic batch photo processing. **ID Photo Processor** provides fast and accurate face finding on the source images, and face cropping according to the settings made by the user.

If you have a database of varying sized photos and wish to produce the ID cards with consistent image dimensions **ID Photo Processor** will do this job easily.

### Basic features of ID Photo Processor:

- **Open** the source images one by one
- **Find** the human face on each image
- **Crop** the face area to get the pre-set image dimensions
- **Save** the resulting consistent images to the target folder.

**Supported file formats:** JPG, PNG, TIFF, GIF, BMP.

### Possible applications of ID Photo Processor:

- ID photo for ID cards, passes, and badges,
- ID photo for databases, etc.
